# Your 2017/18 Investment Report

Dear member,

The 2017/18 financial year has been a busy time for many Australians and I trust this report finds you healthy and fulfilled.

During the past 12 months, equity markets continued to provide growth against a backdrop of heightened geopolitical issues and the withdrawal of central bank stimulus. Globally, low interest rates contributed to economic expansion and enabled access to cheap funding. Developed markets have outperformed emerging market economies with the latter experiencing a downturn late in the year. Cash and Fixed Interest performance remains subdued and this could hold true for some years to follow.

All of us at Suncorp take our responsibility for looking after your funds very seriously, and will do all we can to help you make the most of your investment account, so I encourage you to take some time to read this Annual Report and your annual statement to better understand how your investments are tracking. Speak to your financial adviser for specific advice – or for more general information, you can speak to us. We're always happy to help.

Thank you for trusting us with your superannuation.

Yours sincerely,

Kathryn Eisenreich  
Head of Wealth

## Use of derivatives

Derivatives are securities that derive their value from another security. Commonly known derivatives include futures and options. We and underlying investment managers for your investment option(s) may use derivatives. Please note that the investment strategy of each investment fund doesn't allow the use of derivatives for speculation or gearing purposes.

From time to time, we may use cash proceeds from terminating investment options to purchase derivatives, such as futures, for transition management purposes if permitted by law and it is consistent with the Fund's investment strategy. However, we won't use derivatives for gearing or speculative purposes. We may, for instance, purchase derivatives where we undertake the termination of an investment option, with the proceeds deposited into cash temporarily. The aim of using derivatives in these circumstances would be to help reduce the risk of members' money in the Fund missing out on market returns during the period in which their funds are held in cash. Markets go up and down, so there is a risk the value of your investment may decrease.

## Buy-sell spreads

You may incur a buy-sell spread when you make contributions, withdraw or change your investment funds. This 'spread' is the difference in the buying price and selling price of the investment fund, and generally covers the transaction costs of buying and selling the underlying assets of that investment fund. It ensures that non-transacting members are not disadvantaged by the activity of transacting members. The spread isn't a fee paid to us or the investment manager. It is retained within the underlying investment option to cover these transaction costs.

The investment manager (including us) may vary the buy-sell spread costs from time to time including increasing these costs without notice when it is necessary to protect the interests of existing investors and if permitted by law. The updated information will be disclosed in our monthly investment options performance reports available on our website.

## 2. Non-unit linked investments

### 2.1 Tandem investors

#### **Your policy explained**

Assets of the Tandem investment fund comprise entirely of investments in the Suncorp Life Statutory Fund No. 1. Each Tandem policy has its own investment account within this Statutory Fund.

Your Tandem investment policy provides that the benefit payable is the balance of your investment account. This balance comprises, at any time, the sum of insurance fees received plus interest allocated less expenses and withdrawals.

#### **Interest crediting rates**

Interest is allocated to your investment account as at 30 June each year. As provided in the policy, the rate of interest credited each year is the rate earned by the assets of the Tandem investment fund (including capital gains and losses), after providing for income tax, expenses (including our management fee) and movements to or from reserves. If your policy is surrendered before 30 June, interest will be added at the date of surrender using the prevailing interim rate, which could be different from the final declared rate.

For the year ended 30 June 2018, interest has been credited to your account at the rate of:

Ordinary accounts 2.34%

Super accounts 3.30%

The interest crediting rates for the last 5 years have been:

Year ended 30 June	Crediting rate % pa	
	Ordinary	Super
2018	2.34	3.30
2017	1.72	2.55
2016	1.19	1.90
2015	2.77	3.86
2014	3.78	5.10

Past performance is no indication of future performance.

## 2. Non-unit linked investments

### Investment objective and strategy

It's Suncorp Life's policy to ensure that there is never a negative crediting rate. These objectives are achieved through an appropriate mix of investment assets in the fund, the use of reserves and occasional financial support from Suncorp Life.

### Investment portfolio

The following table provides the asset allocation for your portfolio in the Suncorp Life Statutory Fund No. 1 for 2017 and 2018 as at 30 June.

## 2.2 Capital guaranteed policies

### Your policy explained

The underlying assets of the policies covered by this section of the Investment Report comprise entirely of investments in the Suncorp Life Statutory Fund No. 1.

The Capital Guaranteed Fund provides for those investors who want an absolute guarantee that their investment (and the final rate of return credited), can't be eroded by later adverse movements in financial markets.

The guarantee provided by Suncorp Life is that any amounts allocated to the investment account, including declared final rates of interest, are guaranteed.

The tables on the following pages show the interest rate histories for both ordinary investment plans and super plans.

Australian listed property		Australian shares		International shares (unhedged)		International listed property		Infrastructure	
2018	2017	2018	2017	2018	2017	2018	2017	2018	2017
-	-	10.2	10.6	16.1	15.0	-	-	-	-

The super plans have achieved a higher rate of return as they are subject to a lower tax rate. All returns shown are net of tax and charges.

Suncorp Life declares interest rates for non-participating Capital Guaranteed policies for each six months ending 30 June and 31 December after the end of each period.

For participating Capital Guaranteed policies, interest rates are declared annually for each twelve months ended 31 December, after the end of each period. An interim rate will be paid to policies which are cashed-in prior to the next declared interest rate. The interim rate could be different from the final declared rate.

The interim rates shown in the tables on the following page are not necessarily the final rates for the period 1 July 2018 – 31 December 2018.
